

Learning what changes, retaining what still applies

Locked matched-history pilot | 8 seeds | two gap orders per seed | equal arrivals and update counts

— Pooled — Recurrent - - - Frozen features
— Original conditional — Query routing - - - Oracle (privileged)

A Learning a new visible dependency

B Query-routing gain in new-learning AUC

C Reuse and retention of valid old knowledge

D Noisy feedback; unchanged physics

Means average gap orders within seed. Query outcomes are disjoint from feedback. Intervals are descriptive; this is one synthetic world.
Prespecified comparison decision: FAIL. See the full report for adequacy checks, all controls, and limitations.
