

Can future usefulness guide what a learner keeps?

Joint-persistence pilot | 288 runs | 8 paired seeds | fixed model and replay capacity

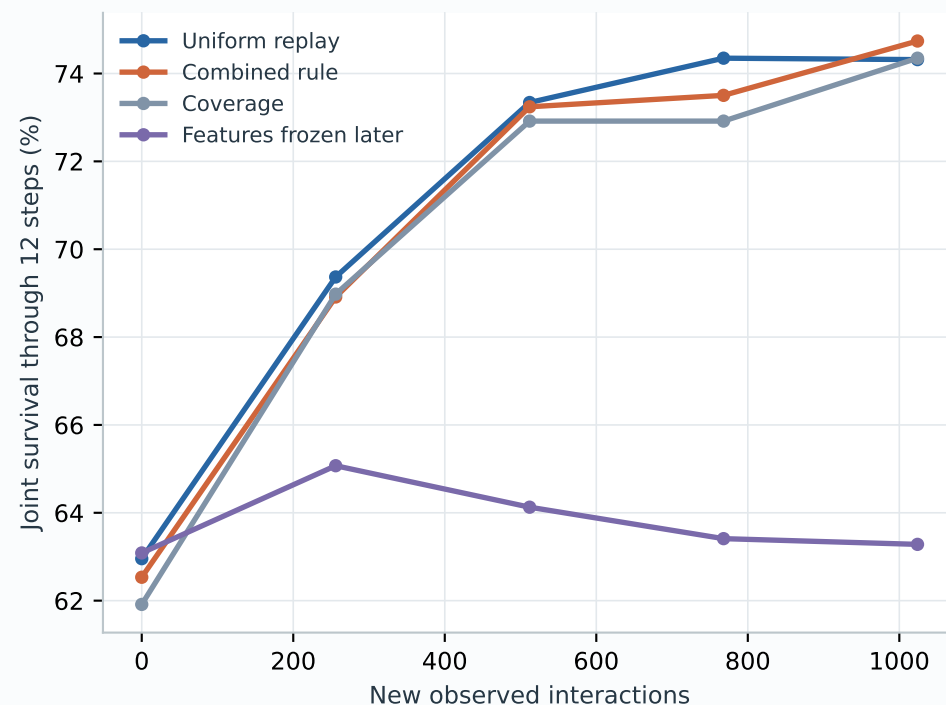

A Remembering after a long absence

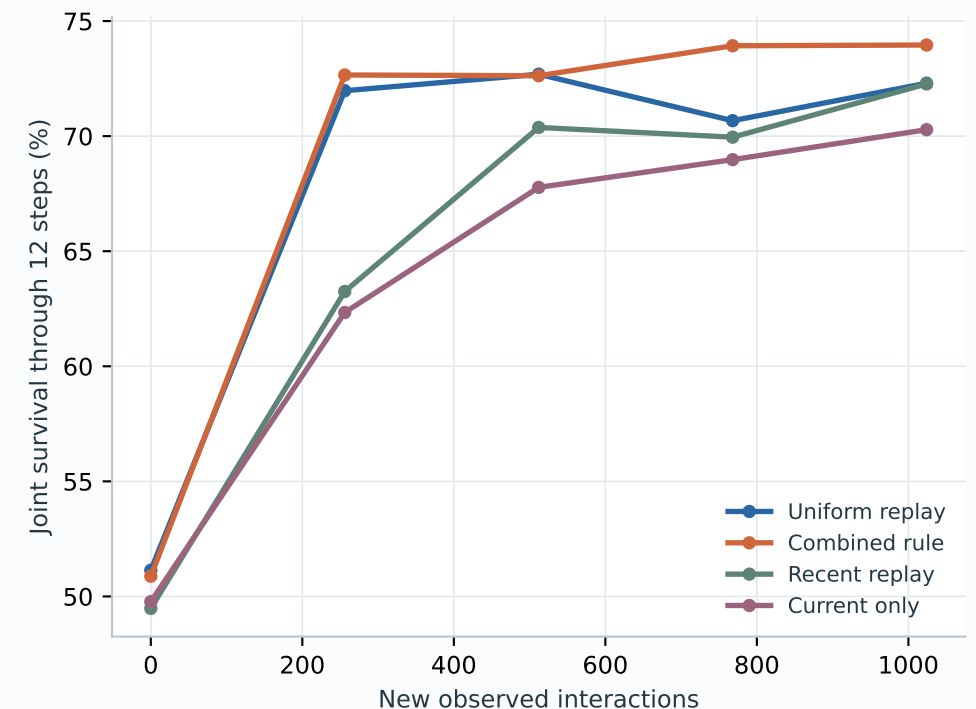

B Transferring to withheld combinations

C Learning a new dependency late

D Revising a familiar but changed rule

Primary combined-rule effect: -0.78 pp. Continuation screen: not met. Dots: paired seeds. Diamonds and bars: mean and descriptive 95% bootstrap interval. Learning curves show seed means. This small finite-horizon study does not establish a general continual-learning mechanism.
