

Returning rules, revised rules, and misleading feedback

Every branch starts from the same continuing learner; only the declared training state is reset.

Continue Reset Adam Reset replay Reset both

Top and middle: means over 6 seeds. Compare interventions within each branch; evaluation subsets differ between branches.
Bottom: each paired seed, mean diamond, and descriptive 95% bootstrap interval. Clean/noisy observations and actions match.
Retention probes use clean support. Noisy prediction curves include corrupted feedback in the learner's recent history.
